

IMPORTANT NOTICE

Collins Avenue Drainage Project Begins November, 2005

93rd Street to 94th Street

LANE CLOSURES & DRIVEWAY IMPACTS EXPECTED!

This November, contractors for the Florida Department of Transportation (FDOT), District Six Construction Department, will begin a minor Drainage Improvement Project along Collins Avenue between 93rd Street and 94th Street in the Town of Surfside. The intent of this project is to enhance storm water drainage on the road in this area.

This project includes installing a new 18-inch drainage pipe underground and constructing trench drains along the curb between 93rd Street and 94th Street. Once the drainage is completed, the contractor will restore the roadway and any sidewalks, curb and gutter and driveways that have been affected by this work.

In order to perform this work safely, the contractor will close one northbound travel lane and the parking lane on the west side of Collins Avenue/SR A1A and establish a work zone behind concrete barrier wall. At least one northbound lane will remain open at all times. Motorists might experience delays when traveling through this area.

Access to adjacent residences will be maintained at all times except when project-related work requires closing an area temporarily.

This work is expected to take approximately six weeks to complete. However, this schedule could change in response to bad weather or other unforeseen circumstances.

We thank you for your patience and support while this work is being performed. If you have any questions regarding this project, please contact the CEI Project Engineer John Hart at (305) 654-7189, or call the project Public Information Manager, Tish Burgher, at (305) 499-2391.
